

SR. SOFTWARE ENGINEER IN DATA - SANDY, UTAH –

The Sr. Software Engineer in Data is responsible to play a crucial role in building and maintaining the infrastructure that enables data collection, processing, storage, and analysis. Work closely with our data scientists, analysts, and other cross-functional teams to ensure that data is readily available and accessible for various business needs.

Key Responsibilities:

- **Data Pipeline Development:** Design, build, and maintain robust and scalable data pipelines to ingest, process, and transform data from various sources.
- **Data Integration:** Develop solutions to integrate data from diverse sources, such as databases, APIs, and external data providers.
- **Data Modeling:** Create and maintain data models, ensuring data accuracy, consistency, and reliability.
- **Data Warehousing:** Manage and optimize data storage and data warehousing solutions to support reporting and analytics.
- **ETL (Extract, Transform, Load):** Implement ETL processes to cleanse, transform, and load data into the data warehouse.
- **Performance Tuning:** Monitor and optimize data pipelines and database performance for efficiency and scalability.
- **Data Security:** Implement and maintain data security protocols and access controls to safeguard sensitive information.
- **Documentation:** Create and maintain comprehensive documentation for data engineering processes, data models, and systems.
- **Collaboration:** Work closely with data scientists, analysts, and other stakeholders to understand their data requirements and provide solutions.
- **Automation:** Develop and maintain automation (Unit, functional & integration test) scripts and tools to streamline data engineering processes.

This position does allow occasionally working from home.

Work Schedule: Monday to Friday, 9 am to 5 pm

Qualifications: Master's degree in Computer Science, Data Analytics, Information Technology, or a related field, or foreign equivalent; and one year of experience in the information technology field.
